

Waenawin Waeyakoh:

It's not only the subway that's dirty. Did you know that New York City is the dirtiest in this nation? With more pests and litter than any place else, according to a review of government data by the cleaning-services company Busy Bee. That is why I believe that New York City should be cleaner and have less pollution. First of all, is because then Rodents and Creepy-Crawlies are everywhere. My second reason is it'll be more comfortable for anyone who visits and us the residents that live here !My final reason why New York City should be spotless is because people could get sick.

The First reason why New York City should be squeaky clean s that rodents and bugs are mostly everywhere you go you may not know it but there are approximately **2 million rats in New York City alone**. An example of NYC being infested with creepy crawlies is going to be a true Mini-Story that happened to me. Me and my family were walking home on Saturday night near Radio City. We were laughing, talking, and having a good time walking home. Just until a cockroach jumped in front of me. I jumped away from the pest, petrified of it. Me as not a fan of Big Cockroaches naturally ran away from it and the rest of the night watching for Cockroaches to jump from the shadows. This is why my first reason is that the city should be more clean.

My second reason why NYC should be more clean is because it would be more comfortable for People who live in NYC and for the people who visit NYC. For example, in the article " New Yorkers are Leaving the City in Droves : Here's why They're Moving and Where They're Going" By Jack Kelly almost 300 people are fleeing New York City every day. That is about 109,500 fleeing per year! And part of the reason New Yorkers are fleeing is because of the dirty-ness of the city.

My final reason why NYC should be hygienic and clean is because people could get sick. For example, people with asthma their condition could worsen also people could have asthma. An example is the AAFA says " air pollution may also trigger your asthma. Small particles in the air can pass through your nose or mouth and get into your lungs. ... The particles can make asthma worse." That shows that air pollution makes people with asthma there condition could worsen. Also another example is the Coronavirus because people could get sick from the Coronavirus if the places they go aren't cleaned properly.

To sum up, NYC should be more clean because pesks come all the time to ruin a day for a person, the dirtiness makes it an unpleasant experience for tourists and residents that live NYC and Finally the pollution in the air worsens asthma and unclean places is a place where hundreds could get sick. So I hope you will agree that NYC is a place where it should be more clean.
